

## RFID Tool Tracking for a Tooling Company Warehouse

A tooling company could never find the right tool when a job started. We installed RFID readers on warehouse doors and tagged more than 30,000 items so every tool is automatically flagged as out on a job or back in the warehouse as it passes through a doorway.

### KEY RESULTS

**30,000+**

tools and items RFID tagged

**3**

inspection periods to complete tagging

**Real-time**

visibility of tools in or out of warehouse

**Major**

reduction in lost tools and job delays

### BEFORE

- Tools frequently went missing between jobs, causing delays and unnecessary re-purchasing
- Staff spent hours searching shelves and vehicles for equipment that had already left the warehouse
- There was no reliable record of which tools were on which job site
- Manual check-in and check-out processes were ignored during busy periods

### AFTER

- 30,000+ - tools and items RFID tagged
- 3 - inspection periods to complete tagging
- Real-time - visibility of tools in or out of warehouse
- Installed industrial RFID readers above the main warehouse entry and exit doors

*"We now know exactly what left the building and what came back. Jobs start faster, we buy fewer replacement tools, and the yard staff are not wasting half their day searching."*

- Warehouse manager, tooling company
