

Starlink Mini Fleet for a Trucking Company

A local trucking company wanted its drivers to stay connected on long hauls and to keep trailers monitored in real time. We securely installed Starlink Mini units across 100 trucks and built a trailer Wi-Fi network for temperature control and truck monitoring.

KEY RESULTS

100

trucks fitted with Starlink Mini

Always on

driver voice and video contact

Live

trailer temperature and truck
monitoring

Secure

network segmentation per
vehicle

BEFORE

- Drivers often lost mobile coverage on remote routes and could not stay in touch with family
- No reliable internet for navigation updates, messaging and basic welfare on the road
- Refrigerated and sensitive cargo needed continuous temperature monitoring
- Trailer and vehicle telemetry was unavailable while away from the depot

AFTER

- 100 - trucks fitted with Starlink Mini
- Always on - driver voice and video contact
- Live - trailer temperature and truck monitoring
- Fitted 100 trucks with ruggedised Starlink Mini units and secure mounting brackets

"Our drivers can call home from anywhere now, and we know exactly what is happening in every trailer without waiting for it to come back to the depot."

- Fleet Operations Manager
