

Moved to WatchGuard Firewall for Secure Office Access

A growing office was running on a basic ISP router with no real visibility into who or what was on the network. Staff needed secure, reliable access to cloud apps and the head office systems without the constant threat of malware or unauthorised devices.

KEY RESULTS

100%

of traffic inspected by the firewall

0

successful malware infections since cutover

24/7

visibility into network activity and threats

BEFORE

- Consumer-grade router with default settings and no central security policy
- No separation between staff, guests, and sensitive company systems
- Infected devices and phishing links were reaching users unchecked
- Remote workers had no safe way into office resources

AFTER

- 100% - of traffic inspected by the firewall
- 0 - successful malware infections since cutover
- 24/7 - visibility into network activity and threats
- Replaced the ISP router with a WatchGuard Firebox sized for the office and expected growth
