

Five-site managed network map

WatchGuard firewalls secure every location, Ubiquiti switches and access points provide the LAN and Wi-Fi, dark fibre links the data centre to head office, and Swoop 1 Gbit / 1 Gbit fibre delivers internet at the data centre where the servers and storage live.

Standard site stack

- WatchGuard firewall at every site
- Ubiquiti switches + Wi-Fi access points
- Servers and storage at the data centre
- 24/7 monitoring on every site and link

Design notes

Security at every site

- WatchGuard firewall per location with IPS, gateway antivirus and APT blocking
- Branch VPN between sites and mobile VPN for remote staff
- Corporate, guest and IoT traffic separated onto their own VLANs
- Firmware patching, quarterly rule reviews and configuration backups

Connectivity and resilience

- Dark fibre between the data centre and head office for low latency
- Swoop 1 Gbit / 1 Gbit symmetrical fibre internet at the data centre
- Managed WAN links to each branch with failover paths
- Carrier faults escalated and chased by us, not by your team

LAN, Wi-Fi and core services

- Ubiquiti switching sized with PoE for phones, cameras and access points
- Wi-Fi designed from heat maps and validated on site
- Servers, storage and backup consolidated at the data centre
- 24/7 monitoring on every switch, access point, firewall and link

PRICING

Network design, hardware and managed network services are priced on application. Every quote is built from your site count, link requirements and support expectations, then delivered as a fixed monthly managed network fee plus clearly priced project work.
